### DETAILED ACTION

1. Claims 28, 30, and 35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims recite "average diameter of the added microspheroidal particle fines is... of the mean diameter of the resulting microspheroidal particles". The recitation renders the claims indefinite and/or confusing. There is no units of the diameter recited.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 21-43 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Plank et al 3,816,342.

The cited prior art discloses a method for fluid catalytic cracking of HC using a composite catalyst of highly active aluminosilicate and a matrix material and recycled fines as claimed. See columns 2, and 4-13. The fines added to the aluminosilicate and matrix may be of a size up to about 40 microns weight mean particle diameter.

Patentees disclose that "special advantage may be gained also by the addition of fines below about 7 microns and preferably in the size range of from 0.3 to 3.0 microns". See column 11, line 5 et seq. The composition is used in making attrition resistant particles

used for fluid catalytic cracking of HC's. It is the Examiner's position that the prior art disclosures have features and characteristics as claimed.
